## **DETAILED ACTION**

### ***Drawings***

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference character "B" has been used to designate all of the distinct brackets.
2. The drawings are objected to under 37 CFR 1.83(a) because they fail to show reference character 'F' as described in the specification on page 4, paragraph 21. Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d).
3. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Specification***

4. The abstract of the disclosure does not commence on a separate sheet in accordance with 37 CFR 1.52(b)(4). A new abstract of the disclosure is required and must be presented on a separate sheet, apart from any other text.

Art Unit: 3732

5. The disclosure is objected to because of the following informalities: on page 5, at the bottom of paragraph 27, a word or words is/are missing. Also, applicant needs to update the first line of his specification to claim priority.

***Claim Rejections - 35 USC § 103***

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

8. Claims 1—7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kim (US 2003/0044745) in view of Divis et al (Re 34,249).

Kim adequately discloses an apparatus for driving an anchor to fix an orthodontic wire including a fixed holding part 20a with grip 11a, a movable part 20b with grip 11b, a supporting protrusion 20a and an anchor 'setting up' part 41 at which the anchor is installed. Kim's apparatus is further disclosed with the fixed and moving parts being connected via rotatable shaft 12 with an elastic member 13 that can move the holding and moving parts slidably with respect to

one another. Kim adequately discloses the invention as claimed as discussed above, but fails to teach a penetrating hole in the fixed holding part and an adjusting threaded screw that fits in this penetrating hole.

However, Divis et al do teach a threaded adjusting screw (Figures 1 – 3) that provides support for adjustment of an anchor. Therefore, it would have been obvious to one of ordinary skill in the art, at the time the invention was made, to modify Kim's fixed holding part by using Divis's teaching by incorporating a threaded hole in the apparatus and using an adjusting screw in order to provide additional support and anchoring to the apparatus.
